GRANT INVOLVEMENT & RESEARCH SUPPORT

PENDING

R01HD110542A (Fidler, Bishop, Baumer)

Proposed 07/01/2023-06/30/2028

NIH/NICHD

Direct Cost: \$6,365,279

Autism in Young Children with Down Syndrome

Role: Co-Investigator: The major goal of this project is to identify developmental and biomedical indicators of risk for autism in young children with Down syndrome.

Status of Support: Pending 5th percentile

ACTIVE

R01 HD105233-01A1 (Daunhauer)

Proposed 09/01/2022-08/31/2027

NIH/NICHD

Direct Cost: \$3,302,054

Obesity Prevention Targets in Down Syndrome

Role: Co-Investigator; This longitudinal project aims to identify risks for developing overweight/obesity in toddlers and preschoolers with Down syndrome, including examining child factors (physical activity, motor abilities, sleep, dietary intake) and caregiving (SES, feeding practices, and caregivers' support of child's physical activities) while controlling for sex and co-occurring conditions.

R34 DA056759-01 (Phillips)

Proposed: 08/15/2022-06/30/2025

NIH/NIDA

Direct Cost: \$450,000

Mobile adaptive intervention to reduce negative consequences associated with simultaneous alcohol and marijuana use in young adults in primary care

Role: Co-Investigator; The proposed study will develop a mobile adaptive ecological momentary intervention (aEMI) targeting craving, and protective behavioral strategies (PBS) and test its feasibility

and preliminary efficacy in community members in Hawai'i who co-use alcohol and cannabis. After development we will conduct a randomized controlled trial of the aEMI.

R01 CA 258337 (Gage-Bouchard)

Proposed: 12/15/2021-11/30/2026

NIH/NCI

Direct Cost: \$3,234,730

Behavioral Parenting Skills as a Novel Target for Improving Pediatric Medication Adherence

Role: Co-Investigator; This multidisciplinary study examines how parental behaviors contribute to medication adherence in their children. CO-I Prince's primary role is research design, statistical analyses, and dissemination of findings.

**Ruth L. Kirschstein National Research Service Award
(NRSA) Individual Predoctoral Fellowship (Parent F31),**

Proposed: 07/01/21-07/01/23

Direct Costs: \$26, 898.00

Ecological Momentary Assessment of Mechanisms of Change during a Mindfulness-based Intervention for At-risk Adolescents (1 F31 AT011642-01)

Role: Primary Collaborator, This study utilizes ecological momentary assessment to understand the extent to which a mindfulness-based intervention promotes the maintenance of mindfulness and healthy emotion regulation in moments of stress among at-risk adolescents. This research is expected to (1) characterize the real-time, dynamic relationships between life stressors, state mindfulness, and state emotion regulation difficulties in at-risk adolescents and (2) to clarify the extent to which participation in an MBI compared to a control condition changes these real-time, dynamic relationships.

R01HD099150-0 (Fidler)

9/1/2019 – 8/31/2024

NIH/NICHD

Annual Direct Costs: \$654,154

Executive Function Outcome Measures for Young Children with Down Syndrome

Role: Investigator/Methodologist; In this study, 210 young children with DS (ages 2.5–7.99 years) will be assessed at four waves of data collection (baseline, two weeks, six months, and 12 months) to establish reliability, validity, internal consistency, and sensitivity to change for a novel executive function assessment battery. A promising set of laboratory tasks has been selected to capture aspects of cognitive vulnerability in DS in the area of EF (working memory, inhibition, shifting, and planning). The proposed measures will minimize phenotype-related confounds that threaten the reliability and/or the validity of early cognitive assessment in DS. An advanced quantitative analytic approach will be used to characterize psychometric properties of early EF measures in order to guide measure selection in future clinical trials.

Direct Cost: \$235,970

Exploring Intoxication During Acute Alcohol and Cannabis Co-Administration: A Focus on Cannabinoid Content and Order Effects

Role: Co-Investigator; Alcohol and cannabis administration study examining the acute effects of both substances as well as order of administration effects. This study aims to test the effects of cannabis concentrates containing different THC/CBD ratios, as well as order effects (i.e., alcohol before cannabis vs. cannabis before alcohol) on objective intoxication and subjective intoxication when cannabis is acutely ingested along with a moderate dose of alcohol in a sample of heavy drinking community participants who regularly use cannabis.

R01DA003371 (Prince, Stanley, & Swaim)

NIH/NIDA

Direct Cost: \$3,791,180

Substance Use Among American Indian Youth: Epidemiology & Etiology

Role: Multiple-Principal Investigator; Large-scale epidemiological study of American Indian (AI) youth. The foci of this proposal are to continue collecting nationally-representative data on substance use, etiological factors that portend risk or protection, and a range of school, community, and cultural factors for reservation-based adolescents. This project will extend previous work with an emphasis on low-base rate/high-risk substance use (e.g., opioids) and high-base rate/high-risk substance use (e.g., alcohol). In addition, we will extend the age range of the sample to include 6th grade students to better understand factors linked to initiation.

Direct Cost: \$200,000

Enhancing Substance Use Disorder Identification and Treatment in Mental Health Treatment Education

Role: Co-Principal Investigator; The project is designed to enhance the education and training of graduate students in mental health treatment graduate programs in the identification and treatment of Substance Use Disorders (SUDs). The project will develop two separate programs, one combining addiction counseling and social work education at the masters level and one combining addiction counseling specialty training and counseling psychology generalist training at the doctoral level.

The Investigation of Daily Mindfulness and Emotion Regulation as Therapeutic Mechanisms in a Mindfulness-Based Intervention for Adolescent Depression and Metabolic Health

Role: Co-Mentor and Statistical Consultant; This study examines how improvements in mindfulness and emotion regulation may underlie a mindfulness-based intervention's (MBI) benefits for adolescent depression and metabolic health using repeated daily sampling measures in the context of an RCT. This research is expected to clarify (1) the underlying therapeutic mechanisms of an MBI, (2) how theoretical mechanisms (i.e., changes in mindfulness and emotion regulation) unfold in daily life and (3) how these daily improvements influence depression and metabolic health. Co-mentor Prince's primary role is to provide feedback on the research and data analytic plan and to mentor the data analysis portion of this project.

Early risk for ADHD symptoms in young children with Down syndrome

Role: Co-Investigator; The aim of the proposed study is to conduct a retrospective analysis to evaluate associations between infant cognitive control and the presentation of Attention Deficit and

Hyperactivity Disorder (ADHD) symptoms at ages 4-5. The study will utilize data collected from a group of 78 infants with Down Syndrome and link these to current presentations of ADHD symptoms. CO-I Prince's primary role is research design, statistical analyses, and dissemination of findings.

Direct Cost: \$3,600,000

The Influence of Social Network Size, Composition and Function on Psychological Outcomes of Pediatric Cancer Caregiving: Relationships across Time and around Periods of Distress

Role: Co-Investigator; This multidisciplinary study examines how social network experiences influence parental coping over time for parents of children diagnosed with cancer. The research will clarify the network properties that are associated with access to different kinds of support, characterize the patterns of network engagement that are associated with improved parental psychological adaptation to pediatric cancer, and set the stage for refining and testing clinical interventions targeting cancer caregivers. CO-I Prince's primary role is research design, statistical analyses, and dissemination of findings.

Direct Cost: \$28,500

Adapting a Social Norms Approach to the Prevention of Cannabis Misuse among College Students

Role: Co-Investigator; The goal of this project was to provide empirical support for an online intervention to reduce cannabis use. Co-Investigator Prince's role was to help with study design, complete data analysis, and disseminate research findings. This project lead directly to an additional \$28,500 of funding from the Associate Dean of Health and Human Sciences Shillington's research funds and funds from Health Education and Prevention Services at Colorado State University to revise the intervention in response to changing cannabis legislation.

AWARDED AND NOT FUNDED

(Conner & Prince)

Proposed: 2017

Health Resources and Services Administration

Direct Cost: \$1,300,000

Behavioral Health Workforce Enhancement and Training

Role: Co-Principal Investigator; The objective of this grant was to provide financial assistance to students enrolled in the Master's in Addiction Counseling program at Colorado State University. The application was awarded and recommended for funding but could not be approved for funding based on available government funds.
